PROFILE

Junior Data Scientist trained in applied mathematics, statistics and actuarial science, with practical experience in data analysis, machine learning and automation. My approach covers the full workflow: problem framing, data preparation, feature construction, model comparison, validation and clear communication. I am interested in work where statistical rigour must lead to a usable, documented result that both technical and business stakeholders can understand.

Target positioning: predictive modelling, time series, risk and insurance, operational data, ML prototypes and lightweight analytical pipelines.

TARGETED TECHNICAL SKILLS

Modelling & validation	Regression, classification, clustering, time series, actuarial models, feature engineering, cross-validation, metrics and error analysis.
Data preparation	Collection, cleaning, joins, transformations, anomaly detection, SQL and reproducible pipelines.
Core stack	Python, pandas, NumPy, scikit-learn, XGBoost, statsmodels, SciPy, Matplotlib, SQL, R, SAS, Excel VBA and Jupyter.
Tools & delivery	FastAPI, SQLite, REST APIs, Playwright, Git, Tableau, Power BI, treatment documentation and testable prototypes.

PROFESSIONAL EXPERIENCE

Data Science & Actuarial Intern <i>SADA Assurances - Finance & Control Department</i> • Prepared and checked actuarial and financial data; contributed to reserving work and development-triangle analysis. • Produced calculations, comparative analysis and reporting with R, SAS and Excel VBA; structured recurring treatments.	Apr. - Aug. 2024
Data Analyst Intern <i>Dental Laboratory</i> • Structured and analysed quality and operational monitoring data; created usable indicators. • Cleaned, traced and reported information in a demanding technical production environment.	Apr. - Aug. 2023
Data Analyst Intern <i>Iterato</i> • Cleaned, reconciled and analysed supplier data with Python, SQL and Excel; created KPIs. • Automated collection and reporting tasks to produce reproducible flows.	May - Jul. 2022
Administrative Agent - Data & Case Management <i>Direction Générale des Finances Publiques (DGFIP)</i> • Handled sensitive data, verified documents and tracked cases across several tax departments. • Applied strict procedures, identified inconsistencies and maintained reliable internal records.	Summers 2016 · 2017 · 2018
Mathematics Tutor <i>Universities & private tutoring</i> • Supported learners from secondary to master level in probability, statistics, analysis, algebra and programming.	2017 - 2024

EDUCATION

MSc Business Analytics <i>Swiss Business School</i> Statistical Learning, Programming for Analytics, Data Visualisation, decision modelling and applied Python projects.	2025 - 2026 · Ongoing
Master's in Banking, Finance & Actuarial Science <i>University of Montpellier</i> Reserving and pricing, Solvency II, IFRS 17, risk theory, stochastic finance, R, SAS and Excel VBA.	2023 - 2024
Master's in Applied Mathematics for Engineering - MAPI3 <i>Toulouse III - Paul Sabatier University</i> Modelling, numerical simulation, optimisation, machine learning, complex systems and Python / C++.	2021 - 2023
Bachelor's in Mathematics <i>University of the Antilles</i> Analysis, linear algebra, probability, statistics and formal reasoning.	2017 - 2020

SELECTED DATA SCIENCE PROJECTS

Machine Learning for Insurance Reserving Python / R · Chain-Ladder · Random Forest · Gradient Boosting · Validation Comparison of traditional actuarial methods and machine-learning approaches for technical reserve estimation. Work presented: data preparation, feature construction, estimate comparison, error analysis and interpretation of under- or over-reserving risk.	ACTUARIAL & ML
Brent 2023 - Econometric Study ARIMA / GARCH · Stationarity tests · Visualisation · Interpretation Study of Brent crude dynamics in 2023 to separate trend, volatility and isolated shocks. Work presented: series preparation, exploration, statistical testing, time-series modelling and synthesis with economic interpretation.	TIME SERIES
TheoForge - Source Research & Structuring Python · LLM / NLP · PDF / Word · Metadata · Citations System designed to import sources, retain provenance and excerpts, and organise evidence for academic or analytical research. Documented functions: Source / Excerpt / Citation models, status and reliability classification, assisted extraction, noise reduction and traceable synthesis.	AI & DATA ENGINEERING
Reach Automation - Qualification Pipeline Python · SQL / SQLite · Scraping · Deduplication · Scoring · Workflows Pipeline collecting and enriching public and web data to structure, qualify and prioritise prospects. Documented functions: normalisation, multi-key deduplication, data-quality and contactability scoring, action queue, channel rules and logs.	DATA & AUTOMATION

APPROACH

Frame → validate → compare → deliver: start from the expected decision, document the data, compare a baseline with several models, analyse errors and deliver a reproducible treatment.

LANGUAGES & ADDITIONAL INFORMATION

Languages	French: native · English: B2 · Spanish: B1.
Strengths & interests	Analytical rigour, autonomy, systemic thinking, synthesis · Chess, calisthenics, reading, philosophy and digital creation.

Project details and sample deliverables are available through the [portfolio](#), [GitHub](#) and [LinkedIn](#).
