PROFILE

Mathematics, actuarial science and business analytics profile with experience in insurance, operational data analysis and applied analytical projects. Focused on clear methods, traceable assumptions and communication between technical and business audiences.

EXPERIENCE

SADA Assurances <i>Actuarial / Data Science Internship</i> - Insurance and claims data analysis - Actuarial modelling and comparison of approaches - Communication of methods, assumptions and limitations	Mar 2024 - Aug 2024
Dental Laboratory <i>Data Analyst Internship</i> - Operational data structuring and analysis - Production of clearer analytical outputs for business use	Apr 2023 - Aug 2023
Iterato <i>Data Analyst Internship</i> Support for analytical workflows and information structuring	May 2022 - Jul 2022

EDUCATION

MSc Business Analytics <i>SBS Swiss Business School</i> Statistical Learning, Programming for Analytics, Data Visualisation	2025 - 2026
Master MBFA - Actuarial Science <i>University of Montpellier</i> IFRS 17, Solvency II, pricing, claims analysis, R, VBA and SAS	2023 - 2024
Master Applied Mathematics for Engineering <i>University of Toulouse III</i> Applied mathematics, probability, modelling and scientific computing	2021 - 2023
Bachelor's Degree in Mathematics <i>University of the French Antilles</i>	2017 - 2020

SELECTED EXPERTISE

Data & modelling - Python, R, SQL, SAS - Statistics and machine learning - Time-series analysis - Model validation	Business & delivery - Business analysis - KPI and dashboard design - Process mapping - Roadmaps and coordination	Systems - AI-assisted workflows - Automation architecture - APIs and integration concepts - Documentation and monitoring
---	---	---

LANGUAGES

French: native | English: advanced | Spanish: intermediate

SELECTED PROJECTS

Machine Learning for Insurance Reserving Comparison of predictive approaches and traditional actuarial logic.
Brent Oil Time-Series Analysis Study of price dynamics, structural changes and uncertainty.
Volatility Surface & Black-Scholes Quantitative modelling and interpretation of volatility surfaces.
TheoForge Traceable workflow for sources, research questions, methodology and writing.
Reach Automation Prospecting workflow with scoring, action queues, channel rules and logs.
