PROFILE

Data Analyst trained in applied mathematics, actuarial science and Business Analytics, with a focus on data quality, readable indicators and business usefulness. I work across the analytical flow: collection, cleaning, reconciliation, exploration, KPI definition, dashboards and communication. My goal is to turn fragmented data into reliable, understandable information that supports operational and management decisions.

Target positioning: operational analysis, decision reporting, BI, data quality, supplier performance, finance and insurance.

TARGETED DATA & BI SKILLS

Preparation & quality	Collection, cleaning, joins, normalisation, anomaly detection, consistency checks and treatment-rule documentation.
Analysis & KPIs	Descriptive analysis, segmentation, correlations, performance monitoring, indicator design and decision-oriented interpretation.
Reporting & BI	Dashboards, visualisations, recurring reporting and business-facing summaries - Tableau, Power BI and Excel.
Core stack	Python, pandas, NumPy, SQL, Excel / VBA, R, SAS, Tableau, Power BI, Matplotlib, Jupyter and Git.

PROFESSIONAL EXPERIENCE

Data Science & Actuarial Intern <i>SADA Assurances - Finance & Control Department</i> - Prepared, checked and analysed actuarial and financial data; reviewed reserving and risk indicators. - Produced calculations and reports with R, SAS and Excel, with attention to source consistency and traceability.	Apr. - Aug. 2024
Data Analyst Intern <i>Dental Laboratory</i> - Organised production and quality data; created monitoring indicators to make gaps more readable. - Cleaned, checked and reported information in a precision-focused technical environment.	Apr. - Aug. 2023
Data Analyst Intern <i>Iterato</i> - Analysed and visualised supplier data with Python, SQL and Excel; built quality and performance KPIs. - Structured databases, filtered information and automated reproducible operational reporting.	May - Jul. 2022
Administrative Agent - Data & Case Management <i>Direction Générale des Finances Publiques (DGFIP)</i> - Verified documents, updated sensitive data and tracked cases across several tax departments. - Identified inconsistencies, followed strict procedures and used internal tools reliably.	Summers 2016 · 2017 · 2018
Mathematics Tutor <i>Universities & private tutoring</i> Supported learners in statistics, probability, analysis and algebra; reformulated complex results for different levels.	2017 - 2024

EDUCATION

MSc Business Analytics <i>Swiss Business School</i> Statistical Learning, Programming for Analytics, Data Visualisation, dashboards and applied projects with Python and Tableau.	2025 - 2026 · Ongoing
Master's in Banking, Finance & Actuarial Science <i>University of Montpellier</i> Financial data analysis, reserving, risk, Solvency II, IFRS 17, R, SAS and Excel VBA.	2023 - 2024
Master's in Applied Mathematics for Engineering - MAPI3 <i>Toulouse III - Paul Sabatier University</i> Statistics, modelling, numerical simulation, optimisation, forecasting and Python / C++ programming.	2021 - 2023
Bachelor's in Mathematics <i>University of the Antilles</i> Analysis, linear algebra, probability, statistics and formal reasoning.	2017 - 2020

SELECTED DATA & BI PROJECTS

Machine Learning for Insurance Reserving Python / R · Chain-Ladder · Random Forest · Gradient Boosting · Validation Comparison of traditional actuarial methods and machine-learning approaches for technical reserve estimation. Work presented: data preparation, feature construction, estimate comparison, error analysis and interpretation of under- or over-reserving risk.	ACTUARIAL & ML
Brent 2023 - Econometric Study ARIMA / GARCH · Stationarity tests · Visualisation · Interpretation Study of Brent crude dynamics in 2023 to separate trend, volatility and isolated shocks. Work presented: series preparation, exploration, statistical testing, time-series modelling and synthesis with economic interpretation.	TIME SERIES
Reach Automation - Qualification Pipeline Python · SQL / SQLite · Scraping · Deduplication · Scoring · Workflows Pipeline collecting and enriching public and web data to structure, qualify and prioritise prospects. Documented functions: normalisation, multi-key deduplication, data-quality and contactability scoring, action queue, channel rules and logs.	DATA & AUTOMATION
Flag & Faith Classifier Python · Preprocessing · Visual variables · Modelling · Evaluation Classification project predicting a country's dominant religion from visual and contextual variables. Work presented: variable exploration, dataset preparation, training, evaluation and critical interpretation of observed relationships.	CLASSIFICATION

APPROACH

Understand → clean → measure → explain: clarify the business need, make data reliable, choose useful KPIs, build a readable output and document rules so the analysis can be reused.

LANGUAGES & ADDITIONAL INFORMATION

Languages	French: native · English: B2 · Spanish: B1.
Strengths & interests	Rigour, autonomy, synthesis, clear communication · Chess, fitness, reading, psychology and digital creation.

Project details and sample deliverables are available through the [portfolio](#), [GitHub](#) and [LinkedIn](#).
