PROFILE

Hybrid profile across data analytics, automation, actuarial finance and digital product building, trained in applied mathematics, actuarial science and Business Analytics. I enjoy turning complex problems into clear systems: analysing, structuring, automating, visualising and delivering useful tools. My background combines insurance, public finance, data analysis, teaching and personal projects across data, AI, web and product.

Target positioning: cross-functional roles combining analysis, automation, process structuring, reporting and prototype building.

CROSS-FUNCTIONAL SKILLS

Data & BI	Python, SQL, R, SAS, Excel VBA, Tableau, Power BI, pandas, NumPy, statistics, modelling and reporting.
Automation & systems	Playwright, FastAPI, SQLite, Pydantic, scraping, pipelines, PowerShell, workflows and file processing.
Web & product	React, TypeScript, Vite, Next.js, Tailwind CSS, prototyping, design systems, product logic and interfaces.
Methods	Rigour, autonomy, synthesis, documentation, teaching, reliability, adaptability and clear communication.

PROFESSIONAL EXPERIENCE

Data Science & Actuarial Intern <i>SADA Assurances - Finance & Control Department</i> - Analysed and used actuarial and financial data with R, SAS and Excel. - Performed modelling, control and reporting work with high reliability standards.	Apr. - Aug. 2024
Data Analyst Intern <i>Iterato</i> - Analysed, cleaned, visualised and structured supplier data with Python, SQL and Excel. - Improved processes and strengthened operational treatments.	May - Jul. 2022
Operations Assistant & Analysis Support <i>Dental Laboratory</i> Tracked quality, structured information and organised internal processes in a technical environment.	Apr. - Aug. 2023
Administrative Agent - Case Management <i>Direction Générale des Finances Publiques (DGFIP)</i> Handled sensitive data, tracked cases and verified documents across several public-finance and tax departments.	Summers 2016 · 2017 · 2018
Mathematics Tutor <i>Universities & private tutoring</i> Supported learners from secondary to university level through teaching, synthesis and structured communication.	2017 - 2024

EDUCATION

MSc Business Analytics <i>Swiss Business School</i> Dashboards, statistical analysis, visualisation, programming and applied decision logic.	2025 - 2026 · Ongoing
Master's in Banking, Finance & Actuarial Science <i>University of Montpellier</i> Actuarial science, risk, finance, insurance, R, SAS and Excel VBA.	2023 - 2024
Master's in Applied Mathematics for Engineering - MAPI3 <i>Toulouse III - Paul Sabatier University</i> Modelling, simulation, data science, programming and complex systems.	2021 - 2023
Bachelor's in Mathematics <i>University of the Antilles</i> Analysis, algebra, probability, statistics and formal reasoning.	2017 - 2020

SELECTED PROJECTS

Reach - Prospecting Automation Product MVP · Product rules · Workflows · CRM · Prioritisation Product combining collection, qualification and action orchestration to make prospecting structured and manageable. Product angle: module breakdown, channel rules, dry-run / draft / auto modes, action queue, priority criteria and iteration logic.	PRODUCT & AUTOMATION
Onepager Studio - Structured Page Generator React · TypeScript · Design system · Structured content · Export Tool generating pages from structured inputs through reusable components, visual consistency and fast production. Work presented: content modelling, component definition, journey organisation, layout rules and coherent deliverable generation.	WEB & PRODUCT
TheoForge - Source Research & Structuring Python · LLM / NLP · PDF / Word · Metadata · Citations System designed to import sources, retain provenance and excerpts, and organise evidence for academic or analytical research. Documented functions: Source / Excerpt / Citation models, status and reliability classification, assisted extraction, noise reduction and traceable synthesis.	AI & DATA ENGINEERING
Machine Learning for Insurance Reserving Python / R · Chain-Ladder · Random Forest · Gradient Boosting · Validation Comparison of traditional actuarial methods and machine-learning approaches for technical reserve estimation. Work presented: data preparation, feature construction, estimate comparison, error analysis and interpretation of under- or over-reserving risk.	ACTUARIAL & ML

APPROACH

Analyse → structure → build → communicate: choose the right solution level, connect data, process and usage, produce a testable deliverable and clearly explain how it works and where its limits are.

LANGUAGES & ADDITIONAL INFORMATION

Languages	French: native · English: B2 · Spanish: B1.
Strengths & interests	Rigour, autonomy, synthesis, teaching ability, adaptability · Chess, calisthenics, reading, philosophy, psychology and digital creation.

Project details and sample deliverables are available through the [portfolio](#), [GitHub](#) and [LinkedIn](#).
