PROFILE

Holder of two master's degrees in applied mathematics and actuarial science, I have taught and supported students since 2017, from secondary school to advanced university level. My goal is to make difficult concepts genuinely understandable: diagnose the blockage, choose the right explanation, build progressive exercises and verify the learner's autonomy. My data and actuarial experience helps me connect theory with concrete applications.

Target positioning: one-to-one tutoring, mathematics teaching, statistics, probability, financial mathematics and university support.

TEACHING SKILLS & SUBJECT AREAS

Teaching & transmission	Level diagnosis, structured progression, reformulation, pace management, alternative explanations and individual follow-up.
Subject expertise	Algebra, analysis, probability, statistics, optimisation, financial mathematics and logic - secondary to master level.
Methods	Progressive exercises, formative assessment, guided correction, summary sheets, exam preparation and motivational support.
Tools	Digital materials, video conferencing, collaborative boards, Python, R and visualisations for quantitative concepts.

PROFESSIONAL EXPERIENCE

Mathematics Tutor / Private Teacher <i>Universities & private tutoring</i>	2017 - 2024
- Supported secondary to master-level learners in algebra, analysis, probability, statistics and applied mathematics. - Built personalised learning paths, prepared examinations, corrected methods and maintained regular follow-up.	
Data Science & Actuarial Intern <i>SADA Assurances - Finance & Control Department</i>	Apr. - Aug. 2024
- Applied probability, statistics and financial mathematics to insurance data in a professional setting. - Modelled, checked, interpreted and communicated results with R, SAS and Excel.	
Data Analyst Intern <i>Iterato</i>	May - Jul. 2022
- Structured and analysed data with Python, SQL and Excel; presented indicators to non-technical stakeholders. - Developed clear and audience-adapted quantitative communication.	
Operations Assistant & Quality Tracking <i>Dental Laboratory</i>	Apr. - Aug. 2023
Worked precisely and methodically in a technical environment with information tracking and quality control.	
Administrative Agent - Case Management <i>Direction Générale des Finances Publiques (DGFIP)</i>	Summers 2016 · 2017 · 2018
Managed cases rigorously, followed procedures and verified documents across several departments.	

EDUCATION

MSc Business Analytics <i>Swiss Business School</i> Application of mathematics to decision analytics, statistical learning, programming and visualisation.	2025 - 2026 · Ongoing
Master's in Banking, Finance & Actuarial Science <i>University of Montpellier</i> Financial mathematics, stochastic models, advanced statistics, risk theory and actuarial science.	2023 - 2024
Master's in Applied Mathematics for Engineering - MAPI3 <i>Toulouse III - Paul Sabatier University</i> Numerical analysis, optimisation, modelling, simulation and complex problem solving.	2021 - 2023
Bachelor's in Mathematics <i>University of the Antilles</i> Complete training in algebra, analysis, probability, statistics and logic.	2017 - 2020

SELECTED TEACHING & QUANTITATIVE PROJECTS

Black-Scholes Lab Python / R · Pricing · Greeks · Volatility · Scenarios Implementation and exploration of the Black-Scholes model for option valuation and sensitivity analysis. Work presented: theoretical pricing, greek analysis, volatility scenarios and visualisation of parameter effects.	QUANTITATIVE FINANCE
DominoCalc - Logic & Combinatorial Computation Logic · Combinatorics · Visualisation · Progressive exercises Structured computation tool designed to represent and practise combinatorial reasoning clearly. Teaching use: step decomposition, possibility visualisation, reasoning checks and progressive difficulty.	QUANTITATIVE TEACHING
Brent 2023 - Econometric Study ARIMA / GARCH · Stationarity tests · Visualisation · Interpretation Study of Brent crude dynamics in 2023 to separate trend, volatility and isolated shocks. Work presented: series preparation, exploration, statistical testing, time-series modelling and synthesis with economic interpretation.	TIME SERIES

APPROACH

Diagnose → explain → practise → build autonomy: start from real errors, reformulate through several representations, increase difficulty progressively, have the learner verbalise the method and verify transfer on a new exercise.

LANGUAGES & ADDITIONAL INFORMATION

Languages	French: native · English: B2 · Spanish: B1.
Strengths & interests	Patience, constructive standards, clarity, adaptability · Teaching, chess, reading, psychology and fitness.
